MOBILE COMPUTING & COMMUNICATIONS REVIEW

Volume 24, Issue 4 • December 2020

## CONTENTS

3 Message from the Editor-in-Chief

### STANDARDS

5 Overview of Quantum Technologies, Standards, and Their Applications in Mobile Devices

### MAKERS

10 3D-Printing Hands That Feel

17

### MOBILE PLATFORMS

17 CCAST: A Framework and Practical Deployment of Heterogeneous Unmanned System Swarms

### HIGHLIGHTS

28 Osprey: A mmWave Approach to Tire Wear Sensings

32 Advances and Open Problems in Backscatter Networking

39 High-Speed Millimeter-Wave Mobile Experimentation on Software-Defined Radios

43 SonicPrint: Discovering the Voice of Fingerprint for Adoptable Biometrics

10

27

### AWARDS

27 2020 ACM SIGMOBILE Outstanding Contribution Award: Martin Cooper

32

# MESSAGE FROM THE EDITOR-IN-CHIEF

## SIGMOBILE EXECUTIVE COMMITTEE

### Marco Gruteser

Rutgers University, North Brunswick, NJ, Chair

### Jason Flinn

University of Michigan Ann Arbor, MI, Vice-Chair

### Giovanni Pau

University Pierre and Marie Curie - LIP6,  
Paris, France, Secretary

### Falco Dressler

University of Paderborn, Germany, Treasurer

### Suman Banerjee

University of Wisconsin, Madison, WI, Past Chair

## ONLINE AND SOCIAL MEDIA INFORMATION DIRECTOR

Xia Zhou, Dartmouth College, Hanover, NH

## SOCIAL MEDIA DIRECTOR

Tadashi Okoshi, Keio University, Fujisawa, Japan

## WEB DIRECTOR Kasthuri Jayarajah

Singapore Management University, Singapore, Asia

## VIDEO AND YOUTUBE CHANNEL DIRECTOR

Viet Nguyen, Rutgers University, New Brunswick, NJ

## COUNCILS, BOARDS & COMMITTEES

Rajesh Balan, Singapore Management University,  
Singapore, Asia, Student Engagement Director

David Culler, University of California at Berkeley, CA,  
Dissertation Award Co-chair

David Kotz, Dartmouth College, Hanover, NH  
Outstanding Contribution and Rockstar Awards Chair

Lili Qiu, University of Texas, Austin, TX,  
Dissertation Award Co-chair

Heather Zheng, University of Chicago, Chicago, IL,  
Research Highlights Chair

## PREVIOUS SIGMOBILE EXECUTIVE COMMITTEES

2013-2017: Prof. Suman Banerjee, Chair

Prof. Lili Qiu, Vice Chair

Dr. Alec Wolman, Secretary

Prof. Marco Gruteser, Treasurer

Dr. Roy Want, Past Chair

2009-2013: Dr. Roy Want, Chair

Prof. Robert Steele, Vice Chair

Prof. Ramesh Govindan, Secretary

Prof. Lili Qiu, Treasurer

Prof. David B. Johnson, Past Chair

2005-2009: Prof. David B. Johnson, Chair

Dr. Jason Redi, Vice Chair

Prof. Chiara Petrioli, Secretary

Prof. Tracy Camp, Treasurer

Dr. Victor Bahl, Past Chair

2001-2005: Dr. Victor Bahl, Chair

Dr. Mary Baker, Vice Chair

Prof. Andrew Campbell, Secretary

Prof. David B. Johnson, Treasurer

Prof. Imrich Chlamtac, Past Chair

1997-2001: Prof. Imrich Chlamtac, Chair

Dr. Victor Bahl, Vice Chair

Prof. Christopher Rose, Secretary

Prof. David B. Johnson, Treasurer

Landon Cox

This month's cover story is about a prosthetic-device company called Psyonic that was started by researchers from the University of Illinois at Urbana-Champaign in 2016. Reading about the underlying technologies was fun, but the one aspect of the article that stood out for me is the importance of affordability. The peer-review process (rightly) prioritizes intellectual novelty

and, as a result, optimize their output for novelty. Sometimes intellectual novelty manifests itself as cost-efficiency (e.g., demonstrating near-equivalent functionality from much lower-cost components), but this is rarely a first-order objective. Delivering a product to the marketplace demands different priorities because unaffordable technologies cannot have impact, no matter how intellectually clever they are. However, just as research incentivized by peer-review to be novel can sometimes result in lower costs, products incentivized by the marketplace to sell can sometimes be novel as well. Psyonic's Ability Hand appears to be a happy convergence of both phenomena.

Another great example of someone who delivered novelty to the marketplace can be found in our honoring of 2020 ACM SIGMOBILE Contribution Award winner, Martin Cooper. Cooper, of course, invented the first cellular phone, the DynaTAC, in 1973. I love the way that Cooper describes his approach to technology as focusing on people rather than products to maximize impact. This is a great way to summarize how technology must make people's lives better but it must also be within reach.

On the opposite end of the spectrum, Vamsi Talla, Joshua Smith, and Shyamnath Gollakota wrote an article on open problems in backscatter communication. Because of the work from people like the co-authors, backscatter has been the subject of many tantalizing research results over the past decade. And yet the article shows how it can take a technology several decades before it is ready to improve

people's lives. Among the authors' ten open challenges, two stood out to me. First, since Apple has embraced ultra-wideband radios in its devices, researchers should start developing ultra-wideband backscatter systems so that it can be better integrated with the technology of today. And looking further out, backscatter should be easier to integrate with everyday materials like plastics. Backscatter is fundamentally a mechanical mechanism and the hope is that research can identify materials with backscatter-supporting mechanical properties. These two challenges represent different but equally important research horizons; in the near-term, backscatter can try to draft in the wake of a specific market force (Apple devices) and, in the long-term, backscatter can dream of being embedded in everyday objects.

The primary reason that this issue's articles have resonated with me in this way is because I recently moved from a research-oriented organization (Microsoft Research) to a product-oriented organization (Azure for Operators). The line between each organization's role in research and product is not so clear cut: Microsoft Research is involved in product development and Azure for Operators will produce research. Nonetheless, being in Azure for Operators has given me renewed appreciation of the challenges of delivering novel research to the marketplace. SIGMOBILE has highlighted research that provides practical solutions to real problems. Beyond the articles described above, each article in this month's issue reinforces this standard: *CCAST* allows heterogeneous drone swarms to communicate, *Osprey* shows how mm-Wave sensing can monitor tire wear, *mm-FLEX* enables experimental research on mm-Wave wireless communication, and *SonicPrint* uses microphones to identify a figurative fingerprint from the audio of a swipe of a literal fingerprint.

It is encouraging that we continue to see the kindred spirits of innovation and impact in our community's work.

## EDITORIAL CORRESPONDENCE

Address to: Dr. Landon Cox, Microsoft Research, 14865 NE 36<sup>th</sup> St, Redmond, WA, 98052, USA, Email: [getmobile\\_editor@acm.org](mailto:getmobile_editor@acm.org). For specific department email addresses, see the "Call for Contributions" on page 47.

## NOTICE TO CONTRIBUTING AUTHORS TO SIG NEWSLETTERS

By submitting your article for distribution in this Special Interest Group publication, you hereby grant to ACM the following non-exclusive, perpetual, worldwide rights: to publish in print on condition of acceptance by the editor, to digitize and post your article in the electronic version of this publication, to include the article in the ACM Digital Library, and to allow users to copy and distribute the article for noncommercial, educational or research purposes. However, as a contributing author, you retain copyright to your article and ACM will make every effort to refer requests for commercial use directly to you.

## ACM GETMOBILE

ACM SIGMOBILE publishes ACM GetMobile four times annually for its members. The Newsletter has a controlled distribution with the compliments of ACM SIGMOBILE.
